The process of risk management in logistics systems is described. The principles of building a risk management system in the logistics activities of domestic enterprises are recommended. The stages of risk management of logistics activities at enterprises of different industries and types of activity are determined.

The stages of risk management of logistics activities at enterprises of different industries and types of activity are determined. It is determined that one of the main reasons that have increased the chances of risks in logistics is economic and political instability in the global environment, caused by quarantine restrictions and fluctuations in the foreign exchange market.

All this had a negative impact on all areas of business activity, increasing the level of uncertainty and vagueness in the relations of enterprises with contractors involved in the logistics chain. Possible ways and methods of minimizing the risks of logistics activities of enterprises and organizations are considered, strategies for minimizing risks in the logistics activities of enterprises are recommended.

It is noted that the issue of reducing risks in the logistics activities of enterprises, taking into account the current economic conditions, is quite relevant, so it needs further development of this issue.
