Keywords: *conflicts, international conflicts, geopolitical instability, international security, classification and typology of conflicts, regulation of international conflicts, formulation of decision*

JEL classification: *F52, F53*

The growth of geopolitical tension and conflicts in the modern world pose a serious threat to the international security system. It has been established that in recent years conflict at the international level has reached a critical level with the highest risk of nuclear confrontation based on the results of the conducted research. In this regard, issues of constructive resolution of international conflicts, establishment and maintenance of a stable structure of international relations are gaining significant relevance.

The purpose of the article is to determine the essence of conflicts with the study of their impact on the state of international security and to build an analytical basis for the formation of systemic decisions aimed at their settlement in the conditions of growing geopolitical tension.

Analysis of conceptual approaches, theories and concepts of conflict research has been provided in the course of the research. Classifications and typologies of international conflicts are considered with an emphasis on the main structural elements of the conflict.

The formation of an analytical system for supporting strategic decision-making has been proposed in order to solve issues related to the settlement of international conflicts and the effective development of international relations. The proposed system combines four subsystems, namely: the subsystem of forming information databases, the subsystem of determining relationships, the subsystem of modelling and the subsystem of forming strategic decisions.

The practical use of the proposed system will make it possible to form analytical information and determine the dominant factors of influence on the socio-economic state and the conflict situation. It is possible to determine the trends in the development of international conflicts and to form strategies for their settlement and increase the efficiency of international relations, taking into account the long-term perspective on the basis of obtaining analytical information.
